

INNOVATION AT WORK

WEKO-RK2

WEKO-RK2 is a special product used to clean process water circuit components and is especially designed for WEKO rotor carrier application systems. According to the specifications below, WEKO-RK2 must be thinned before use and is used as a cleaning solution in water circuits. WEKO-RK2 dissolves and removes residues and contaminants from the system and its components.

may be left in the system have to be thoroughly rinsed if not replaced by new ones, which would be better. For detailed instructions on how to rinse please refer to the instruction manual for the application system.

We have 20 kg canister sizes available. Other sizes available on request.

WEKO-RK2 cleans your WEKO rotor carrier system gently and you can enjoy the overall quality and function of the system for a long time.

Recommended ratio of mixture

- Minor contamination 1:5 (WEKO-RK2 + H₂O)
- Heavy contamination 1:2 (WEKO-RK2 + H₂O)

YOUR BENEFITS

- Very good cleaning properties
- Long time quality of the system
- Reproducibility of recipes
- The surface is protected
- No impurities that cause problems
- Clean working environment
- Dissolves and removes residues

Application

The concentration of the cleaning solution depends on the extent of contamination in the system circuit. A good cleaning effect is achieved from a mixture ratio of 1:5. In the case of heavy contamination, a mixture ratio of 1:2 is recommended. After flushing with cleaning solution, re-rinse several times using clear water until all residues are removed. Filter mats and candles that
